

The Convergence of Real Energy Solutions

A Unified Infrastructure Strategy–Integration Is the Innovation

The future of energy and mobility infrastructure isn't built in silos. It's built on convergence. Everged brings EV charging, renewable energy, battery storage, and microgrid solutions together into one unified infrastructure strategy designed to optimize energy use, reduce costs, improve resilience, and scale as needs evolve.

Where Others Stop, Everged Is Just Getting Started.

THE EVERGED PRODUCT PORTFOLIO

Integrated Energy Solutions Designed to Optimize Performance

EV CHARGING

The gateway to clean mobility.
Everged designs, installs, and manages EV charging infrastructure — ranging from public access to fleet-scale deployments.

- Level 2 and DC Fast Chargers -agnostic solutions
- Turnkey engineering, permitting, and installation
- Remote monitoring and charger management
- Ongoing maintenance and uptime support

RENEWABLE ENERGY

The foundation for cleaner, more cost-effective energy.
Everged designs and deploys solar energy solutions that help organizations generate power on-site, manage energy costs, and support long-term energy goals.

- Rooftop, canopy, ground-mount solar, and wind options
- Turnkey engineering, permitting, and installation
- Scalable solutions designed around site requirements
- System monitoring and performance management

BATTERY STORAGE

Store energy. Optimize how and when you use it.
Everged designs and deploys battery energy storage solutions that help organizations manage energy demand, control costs, and improve energy resilience.

- Commercial and utility-scale battery storage
- Technology-agnostic system design
- Load management and peak demand optimization
- System monitoring and energy management

MICROGRID SOLUTIONS

Bring energy resources together - one intelligent system.
Everged designs and integrates microgrid solutions that coordinate distributed energy resources to improve reliability, resilience, and energy control.

- Customized microgrid design and integration
- Turnkey engineering, controls, and implementation
- Intelligent energy and load management
- Resiliency and backup power strategies

OPTIMIZING THE EoT: ENERGY OF THINGS

We don't just install. We integrate, optimize, and operate.

EVERGED TECHNOLOGY APPLICATIONS

Destination & Experience Venues

Residential & Workplace Communities

Mobility & Transportation Hubs

Public & Government Infrastructure

THE EVERGED DIFFERENCE

Single Point of Accountability Across Energy Ecosystem

Access the world's leading EV charging, renewable energy, storage, and microgrid solutions through a single partner for a simplified and seamless experience. All products are integrated into Everged's energy management platform designed to maximize the control and monetization of all assets.

The Right Products for Each Unique Project

Everged's hardware-agnostic platform allows for unbiased and evolving technology recommendations curated from the best manufacturers and tailored to each individual opportunity. Mix and match OEMs, models, functionality, public/private applications even within a single site.

Flexible Models. Built Around Your Goals.

Every property has different operational and financial priorities. Everged evaluates your goals, infrastructure needs, incentives, and financial objectives. We offer flexible ownership and financing options that support your strategy, from traditional ownership to fully managed solutions.

Performance at Every Level

Every aspect of the Everged ecosystem is designed to give our site hosts and drivers the best experience. With in-house customer service, multiple driver payment options, charger uptime, and ongoing maintenance support, site hosts can feel confident in their deployment now and for years to come.

We don't just install. We integrate, optimize, and operate.
